

STRONGER BUSINESSES START WITH SAFER DATA

Cyber threats are constantly evolving, but a few simple habits can go a long way in protecting your business, your data and your customers.

01

Use Strong Passwords

Create long, unique passwords and update them regularly. Consider using a password manager to keep them secure.

02

Keep Software Updated

Regular updates help fix security vulnerabilities and protect your systems from the latest threats.

03

Be Cautious with Emails

Watch for suspicious emails, links or attachments. When in doubt, don't click and verify the sender through a trusted source.

04

Limit Access to Sensitive Data

Only give access to employees who need it and review permissions regularly.

05

Back Up Your Data

Keep regular backups of important files and store them securely, both onsite and in the cloud.

06

Train Your Team

Make cybersecurity a team effort. Regular training helps employees recognize threats and follow best practices.

**PROTECTING WHAT MATTERS
KEEPS YOUR BUSINESS MOVING FORWARD.**
